AX338

long range rifle

AX338

long range rifle

The highly advanced, new generation AX338 bolt action sniper rifle from Accuracy International is based on the DNA of the battle proven AW series. Inheriting the toughness, reliability, superb accuracy and ease of maintenance of it's celebrated predecessor, the AX Magnum action retains the same flat-bottom design, but is both longer (CIP/SAAMI), and wider allowing the use of a compact and reliable double stack 10-round magazine. *Simply perfection.*

Accuracy

All rifles are shot and function tested before leaving the factory.

1 Butt pad

Fitted with either a bolt-on pad with 10mm and 20mm spacers or the optional quick-adjust butt pad the user can easily customise the length of pull. Butt pad height adjustment can be provided as an additional option.

2 Adjustable Cheekpiece

The standard adjustable cheekpiece adjusts left/right as well as for height to obtain optimum cheek position when using night vision equipment or telescopic sights with large objective lenses. The quick adjust cheek piece option offers a spring loaded platform for rapid tool-less adjustment.

3 Folding chassis

This option allows the stock to be folded for transportation, reducing overall length by 9.25" (235mm) and adding 0.4lb (0.2kg). The stock locks positively in the folded position for security and the avoidance of noise. In the extended position, built-in wear compensation ensures total rigidity.

4 Picatinny rail

Fitted as standard, this rail provides an internationally accepted interface for many optical systems. Alternative height/angle options can be fitted on request.

5 Sling points

Two sling attachment points are mounted on each side as standard. The two forward sling points can be moved according to user preference.

6 Trigger assembly

The reliable, battle proven two stage mechanism from the AW series has a new trigger shoe for fore and aft adjustment up to 0.5" (13mm). Pull weights are adjustable from 3.3-4.4lb (1.5-2.0kg). The complete trigger assembly can easily be removed for cleaning by extracting two socket head cap screws.

7 Barrel

The 27" match grade free floating barrel is threaded deep into the action with a large diameter thread unique to the AX338. Optional barrel lengths, twists, and calibres are available.

8 Butt spike

The extendable spike enables the user to observe the target area for extended periods with minimal fatigue. Designed with quick and fine adjustment to a maximum extended length of 115mm (4.5").

9 New stock design

The new external stock design greatly improves the user's ability to carry and move with the rifle. A shorter rear stock makes shooting easier in bulky body armour. Available in either thumbhole or the new pistol grip configurations.

10 Pistol grip

The ergonomically advanced pistol grip can be fine tuned to fit virtually any user by fitting one of several replaceable backstraps. The pistol grip, combined with the adjustable trigger shoe, allows the AX to achieve a fit like a target rifle. The traditional thumbhole stock is available as an option.

11 Modular bolt

The larger new 0.87" (22mm) dia. steel close fitting bolt, bolt head, locking ring and barrel tenon construction is significantly stronger and capable of withstanding higher temperatures and pressures. An improved leaf-spring style extractor facilitates straightforward removal and replacement.

12 Bonded action

A new strengthened design ensures safety in the most extreme environments. It is permanently bonded and bolted to the stiff aluminium chassis to eliminate movement, ensuring that zero will be maintained.

13 Magazine

Surface toughened, and finished with a multi-part anti-corrosive, anti-friction coating, the compact 10-round double row, military grade steel magazine combined with the revised chassis design makes loading faster and more positive without lifting the rifle.

14 Forend rail system

Free floating tube forend features a slot system for quickly, and securely attaching modular rail sections allowing the user to fit a virtually unlimited variety of optical, ranging, support and carrying accessories.
