

AX50

anti matériel rifle

AX50

anti matériel rifle

Designed to withstand constant military deployment, the new generation AX50 long range anti matériel rifle from Accuracy International is based on the DNA of the battle proven AW50. Inheriting the toughness, reliability and ease of maintenance of its powerful predecessor, the AX50 exhibits all the features necessary to ensure superb accuracy and consistent cold shot performance in the harshest conditions. *Simply perfection.*

Accuracy

All rifles are shot and function tested before leaving the factory.

1 Butt pad

The AX50 is fitted with a large, recoil absorbing, butt pad for increased comfort. The user can easily customise the length of pull using the 10mm butt spacers included.

2 Adjustable Cheekpiece

A height adjustable, cheekpiece is fitted as standard and allows the user to obtain an optimum cheek position when using night vision equipment or telescopic sights with large objective lenses.

3 Rear observation support

The extendable rear support enables the user to observe the target area for extended periods with minimal fatigue. Designed with quick and fine adjustment to a maximum extended length of 50mm (2").

4 New stock design

The new external stock design facilitates a secure yet comfortable shooting position and greatly improves the user's ability to carry and move with the rifle. The polymer stock sides are impervious to all normal cleaners and lubricants used in small arms maintenance.

5 Folding chassis

The chassis features a wear compensated hinge so the stock can be folded for parachute insertions or to facilitate transportation. The stock locks in the folded position for security and the avoidance of noise, and is easily released by pulling firmly on the butt. When folded, the overall length is reduced by 254mm (10").

6 Sling points

Three sling attachment points are provided as standard. The two forward sling points can be moved according to user preference.

7 Pistol grip

The ergonomically advanced pistol grip.

8 Action

A proprietary, flat bottomed, high grade steel action is bolted to the full-length aluminium chassis. A full width recoil lug totally eliminates movement, ensuring that zero will be maintained in arduous conditions. Two pressure release points minimise blowback in the event of a cartridge failure. The integral Picatinny Rail provides an internationally accepted interface for many optical systems.

9 Trigger assembly

The two-stage trigger allows a large sear engagement to be maintained until the first stage is taken up, thereby reducing the risk of an accidental discharge. Adjustable for pull weights of 1.5-2.0kg (3.3-4.4lb), the trigger can easily be removed for cleaning by simply loosening two socket-head screws.

10 Safety mechanism

The two-position safety blocks the firing pin and locks the bolt in the closed position when to the rear, and allows the weapon to fire in the forward position. The safety will only operate when the bolt is cocked.

11 Bolt

The 30mm diameter steel, close fitting bolt, combined with vents and a gas shroud minimises blowback in the event of a cartridge failure. The short-throw (60°) handle lies close to the stock side, just above the trigger, to minimise movement of the user's hand.

12 Barrel

Screwed into the action with a large, 39mm diameter thread, the rigidly mounted 27" match grade free floating barrel delivers consistent cold-shot performance. The double chamber muzzle brake, screwed on and tension clamped, effectively reduces recoil, muzzle flash and dust eruption. A barrel can be changed in less than ten minutes using the barrel change kit.

13 Magazine

One five-shot detachable steel magazine is included. This industry leading design is corrosion resistant and low friction for reliable feeding.

14 Forend rail system

Free floating tube forend featuring a keyhole slot system for quickly and securely attaching modular rail sections allowing the user to fit a virtually unlimited variety of optical, ranging, support and carry options.
